

EXCEPTIONAL - PACKAGE FOR MAPLE (V. 9.5).

The package realizes the ideas elaborated by Hagen Meltzer, Piotr Dowbor and Andrzej Mróz (more details in the file `exceptional.src`). This package is implemented by the last author and is also a part of his Ph.D. dissertation.

The files below should be in the same directory:

- `demo.mws` - few examples how to use the main tools of the package.
- `exceptional.src` - all sources of the package together with references to the theory, full documentation.
- `tubular9.src` - sources of the package TUBULAR created by Piotr Dowbor and Thomas Hübner. Some procedures from this package are used in EXCEPTIONAL.

Technical remark. The package was created and tested with Maple ver. 9.5, so it is highly recommended to use this (or newer) version of Maple!

To use demo please run Maple by double-clicking on the icon of the file `demo.mws` (then the directory with it remains current and Maple will see the other needed files).
